

# Productive Front-End development

**& SP Starterkit Theme**

**& Druppio Small Business Distribution**

For us the best solution for small and medium projects  
is our own Starterkit Theme

# Why and how?

In many cases when the customer does not ask for anything unique, their use is burdensome and unnecessary.

In the SP Starterkit theme upon installing we already have styling for basic elements, and the rest can be added on, or developed in a unique way.

# **Bootstrap, Foundation, disadvanteages.**

- **To many unused thing**
- **Not everything is well documented**
- **Grid system**
- **Heavy**

# Our way

- **One man army, harder onboarding**
- **Nokia 3310 and up**
- **Simplified**

# SP Starterkit

The screenshot displays the SP Starterkit web application interface. At the top, there is a navigation bar with 'Home', 'About', and 'Contact' links. The main content area is divided into several sections:

- Buttons:** A section with 'Primary Button' and 'Secondary Button' examples.
- Text:** A section with 'Text' and 'Text with icon' examples.
- Alerts:** A section with a 'Danger Alert' example.
- Form Elements:** A section with 'Form Input' and 'Form Textarea' examples.
- Typography:** A section titled 'Typography' with sub-sections for 'Headings' (h1 through h5) and 'Body copy'.

The 'Typography' section includes a 'Headings' subsection with a note: 'Bootstrap headings are available in 6 sizes. The h1-h5 classes are available, but when you want to create the look of a heading but still want content to be displayed inline, use the h1-h5 classes with the .display- inline class.' Below this, there are examples of h1 through h5 headings. The 'Body copy' section includes a note: 'Bootstrap body copy is available in 6 sizes. The p class is available, but when you want to create the look of a paragraph but still want content to be displayed inline, use the p class with the .display- inline class.' Below this, there are examples of body copy text.

# What parts it contains

- **HTML elements**
- **Variables**
- **Layout**
